

SUSTAINABILITY

by

floorcoverings

Issues such as sustainability, ecology, recycling and environmental friendliness are key pillars of our German supplier ANKER's corporate strategy. Their vision for the future is to achieve complete sustainability on the basis of resource-neutral and socially responsible production. The company is spurred on every single day by its desire to do the right thing and get ever closer to its goal. At Inspired Floorcoverings, we are a 100% owned and operated Australian company that aspires to achieve the same goals as ANKER, so we sought to bring the German engineered commercial floor coverings product to the Australian market.

Reducing emissions and preserving natural resources, our German supplier ANKER never stops looking for new ways to shape the transition towards more eco-friendly flooring types, backing constructions and fibre materials with its innovative products.

Dimensional CT900915

HABITAT RHOMB - Beautifully crafted in a subtle blend of muted tones, Habitat Rhomb combines abstract sophistication with classical design. Striking geometric patterns are interlaced and overlapped to create fluidity, movement and understated contemporary appeal.

NOSTALGIC - Nostalgic is inspired by Josef Albers, a leading Bauhaus artist of the 20th century, who created visual illusions of geometry through an exploration of variations in colour. With subtle adjustments in colour layers and proportions, Nostalgic on Albers' principles, honouring his Bauhaus aesthetics by infusing classic art concepts with innovative visual illusions and geometric forms.

LINEAR - Linear embodies timeless elegance through its simple yet profound design, transforming any space with quiet sophistication. The clean lines create flow and rhythm, subtly defining areas while maintaining openness. Its balance of sharp lines and negative space adds architectural refinement, making it a versatile choice for both open-plan and smaller spaces.

Inspired Floorcoverings | INDENT DESIGNER RANGES

TEXRA - The name TEXRA is derived from the Latin words for “weave” (TEXERE) and “structure” (STRUCTURA).

TEXRA reflects the idea of interwoven strength and organized form, capturing both the craftsmanship of weaving and the solidity of structural design. This unique name embodies the core principles of both creativity and durability.

Since 1990.

GUT carries out comprehensive testing in three main areas: Pollutants, Emissions and Odour. We have a simple and effective precautionary approach to all three issues by ensuring that any banned, or limited use, chemicals are avoided in the manufacture of any component within the supply chain from raw material to finished product of our members' products. Owners will feel at ease knowing they have chosen a carpet that has been GUT certified.

Each series of products has a corresponding number.

ANKER

ANKER is also a founding member of GUT.

To actively support a sustainable circular economy, GUT has developed the following principles: Material-efficient product design; energy-efficient production and resource-saving distribution; longer useful life of products; recycling; and re-use of materials that Recycled or re-generated.

- 100% PVC-free, Bitumen-free
- 100% Recyclable backing system
- Made from a thermoplastic polyolefin compound, Environment friendly thermoplastic materials of food grade (the same raw materials as baby bottles and microwave oven special meal boxes)
- Professional production line, made at high temperature, with high performance precoating and glass fiber, with excellent dimensional stability.
- Superior delamination and edge ravel strength
- Lower VOC's and better smoke density test data, health and safety,
- in line with European environmental requirements
